---

---

### Welcome to the webinar!

- The webinar will start at the top of the hour.
- If you'd like to type in a question, use the question box on your control panel and we will read the questions aloud after the c. 45 minute presentation
- The webinar will be recorded and you can find it and a pdf handout of the slides at <http://www.extension.org/pages/70280>

**Understanding and Managing Nitrous Oxide Emissions in Intensive Organic Production**

Part 1:  
Why the concern about  $N_2O$  in organic systems?

Ann-Marie Fortuna, NDSU  
Doug Collins, WSU

EXTENSION

---

---

---

---

---

---

---

---

### Why the Concern About Nitrous Oxide Emissions?

- $N_2O$  as a greenhouse gas
  - Relative contribution to global warming
  - Sources
  - Role of agriculture in  $N_2O$  emissions
- Nitrogen cycle and  $N_2O$  production
- Why study  $N_2O$  emissions in organic farming systems?
- Introduction to our experiments
- How we measure  $N_2O$  emissions

---

---

---

---

---

---

---

---

### Major greenhouse gases

Gas	Molecule	Present Concentration (ppm)	Persistence in atmosphere	100 yr global warming potential
$CO_2$		400	centuries	1
$CH_4$		1.8	12 yr	21
$N_2O$		0.33	120 yr	310
$H_2O$		varies	days	--

---

---

---

---

---

---

---

---

### Greenhouse gas concentrations are increasing in the atmosphere

---

---

---

---

---

---

---

---

### Greenhouse gas emissions in the USA totaled 6.7 billion metric tons CO<sub>2</sub> equivalent in 2011

---

---

---

---

---

---

---

---

### Major sources of greenhouse gas emissions in the US

CO <sub>2</sub>	Fossil fuel 94%
CH <sub>4</sub>	Fossil fuel production 41%; Agriculture 32%, Landfills 17%
N <sub>2</sub> O	Agriculture 74%; Fossil fuel 11%

---

---

---

---

---

---

---

---

### Sources of N<sub>2</sub>O emissions in the US 2011

### What is the source of N<sub>2</sub>O emissions from soil?

- Natural part of nitrogen cycle
- Increased agricultural N inputs have increased N<sub>2</sub>O emissions from N cycle

### Nitrogen Cycle and N<sub>2</sub>O

## Nitrogen Cycle and N<sub>2</sub>O

### Given all the other sources of GHG, why study organic agriculture?

- N<sub>2</sub>O is a small piece of the total emissions pie
- Organic farming is a small piece of the agriculture pie
- Tightly coupled nitrogen cycle should reduce N<sub>2</sub>O emissions

### Given all the other sources of GHG, why study organic agriculture?

- Important to understand all sources of emissions
- Organic systems vary widely in N supply from soil and amendments
- Carbon stimulates microbial activity
- Opportunity to compare among organic systems – linking management, yield, soil quality, emissions, and biology

**Long-term organic vegetable cropping systems experiment**

**2003-present**

**Organic reduced tillage experiment**

**2011-present**

---

---

---

---

---

---

---

Soil amendments include High-C compost and Low-C broiler litter.

Chicken (Broiler) litter: **(CKN)**  
Low C application (1.8 - 3.1 dt/ac)

Mixed on-farm compost: **(OFC)**  
High C application (8 - 17 dt/acre)

---

---

---

---

---

---

---

---

Soil quality measurements include physical, chemical, and biological indicators

Bulk Density  
Infiltration  
Compaction  
Particulate OM  
Enzyme activity  
Nematodes  
Collembola  
Microbial biomass  
Nitrogen cycling  
Microbial community structure  
Nutrients and carbon

---

## Gas Sampling Methods

**Chambers**

- Measures gas accumulation over a short time in chambers
- Scale suitable for research plots
- Snapshots: may miss flux events
- Potential for soil disturbance

**Micrometeorological**

- Continuous measurements
- Field scale
- Expensive
- Challenging to interpret

<http://www.mwa.co.nz/publications/wa/vol15-no2-june-2007/article-nitrous-oxide-the-serious-side-of-laughing-gas>

## Gas collection chambers

We use the medium size, balancing area covered with ease of use.

## Chambers are made from restaurant steam table pans

Lid is made from one pan covered with insulation and fitted with a sampling port

Base is a pan with the bottom removed. Bases are left in place between tillage events.

## N<sub>2</sub>O sampled at key points throughout year

### Sampling events:

Before and after  
amendment application

Before and after  
irrigation

Freeze-thaw

---

---

---

---

---

---

---

## Organic farming systems comparisons are from our research plots.

**Organic systems:**  
High C (compost),  
Low C (broiler litter)  
Pasture

**Organic reduced till:**  
Mulched vs. tilled  
barley
